Art Unit: 2833

Claims 5 and 20 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 5, where the outer conductor reaches around the cable outer conductor, conflicts with claim 4, where the cable outer conductor surrounds the outer conductor. It appears that claim 5 is inaccurate. In claim 20, paragraph c, "the shield housing" lacks proper antecedent basis.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 6, 7, 12-16, 19 and 20 are rejected under 35 U.S.C. 102(b) as being anticipated by Mitani 5263877.

Mitani discloses an angled coaxial plug connector having a center conductor 3 connectable to a cable center conductor at 3b and to a complementary center conductor of a mating plug connector at 3a; an outer conductor having a first half shell 6 and a second half shell 7 which are hinged together; and a dielectric 2.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Art Unit: 2833

Claims 17 and 18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Mitani as applied to claim 1 above, and further in view of Takeuchi et al 6575769.

Mitani discloses the invention substantially as claimed. Mitani, however, does not disclose the half shells being made of a synthetic material with a conductive coating. Takeuchi et al discloses a synthetic material 14 with conductive coating 16, and it thus would have been obvious to form the half shells of Mitani in this way, for economy of manufacture.

Claims 2-5 and 8-11 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter: Mitani does not disclose the claimed sleeve; the connection region of the outer conductor being surrounded by the cable outer conductor; nor the hinge-like attachment being formed by at least one hook and an associated engagement opening, nor would it have been obvious to provide Mitani with any of same in view of the other prior art of record.

The other references on Form 892 disclose similar coaxial cable connectors.
